

Texas Municipal Retirement System

Actuarial Valuation Report
as of December 31, 2021

May 26, 2022

Board of Trustees
Texas Municipal Retirement System
Austin, Texas 78701

Dear Trustees:

Subject: Actuarial Valuation Report (“our Report”) of the Texas Municipal Retirement System (“TMRS”) as of December 31, 2021

This is the December 31, 2021 actuarial valuation of the Texas Municipal Retirement System (“TMRS” or the “System”) which determines the contribution rates for the calendar year beginning January 1, 2023. This report describes the current actuarial condition of TMRS, determines recommended city contribution rates, and analyzes changes in these contribution rates. The results presented herein may not be applicable for other purposes. This report reflects the benefit provisions and contribution rates in effect for each of the 901 separate city plans participating in TMRS. Separate liabilities and contribution rates are determined for each of the participating cities. Valuations are prepared annually as of December 31st, the last day of the plan year.

The participating cities’ contribution rates are certified annually by the Board of Trustees (the “Board”), which is the intended user of this report. These rates are determined actuarially, based on the actuarial assumptions and methodology adopted by the Board. The Board’s current policy is that the contribution rates determined by a given actuarial valuation become effective one (1) year after the valuation date. For example, the rates determined by this December 31, 2021 actuarial valuation will be applicable for the calendar year beginning January 1, 2023 and ending December 31, 2023.

Financing objectives and funding policy

The actuarial cost method and the amortization periods are set by Board policy. Contribution rates and liabilities are computed using the Entry Age Normal actuarial cost method. In TMRS, a city’s actuarially determined contribution rate consists of two components: the Employer Normal Cost Contribution Rate and the Prior Service Contribution Rate, which is the amortization of any Unfunded Actuarial Accrued Liability. Both rates are determined as a percentage of active Member payroll. In addition, a Supplemental Death Benefit (SDB) Rate is determined annually for each participating city, if applicable. These SDB rates are listed in Section 5 of our Report.

Progress toward realization of financing objectives

The Funded Ratio (the ratio of the Actuarial Value of Assets to the Actuarial Accrued Liability) is a standard measure of a plan's funded status. Given the plan's contribution allocation procedure, if all actuarial assumptions are met (including the assumption of the plan earning 6.75% on the Actuarial Value of Assets) and absent future benefit changes, it is expected that:

1. The Employer Normal Cost as a percentage of payroll will remain level,
2. The Unfunded Actuarial Accrued Liability will be fully amortized over the remaining amortization period of each city, and
3. The funded status of each city will converge gradually towards a 100% Funded Ratio.

The Funded Ratio of TMRS as a whole is 90.5% and increased from 89.5% in the prior valuation. This increase in the Funded Ratio from the prior valuation is primarily due to a gain from the investment return on the Actuarial Value of Assets of 7.57% which is greater than the assumed rate of 6.75%, positive amortization on a system-wide basis, and contributions greater than actuarially calculated. This gain was partially offset by the upcoming COLA being greater than assumed. (Please note that each city is responsible for its own assets and liabilities and will have its own Funded Ratio.) On a market value of assets basis, the Funded Ratio of TMRS as a whole is 96.3% compared to 91.3% in the prior valuation.

Unless otherwise indicated, each funded status measurement presented in this report is based upon the Actuarial Accrued Liability and the Actuarial Value of Assets. Unless otherwise indicated, with regards to any funded status measurements presented in this report:

1. The measurement is inappropriate for assessing the sufficiency of plan assets to cover the estimated cost of settling the plan's benefit obligations.
2. The measurement would produce a different result if the market value of assets were used instead of the Actuarial Value of Assets.

Benefit provisions and changes

The benefit provisions reflected in this valuation are those which were in effect as of April 1, 2022. In addition to the 892 plans that are actively participating in TMRS, there are another nine (9) plans that are in inactive status with no active Members. No new plan provisions occurred during 2021 that impacted the valuation results, other than individual changes adopted by the various cities.

Of the 892 active cities, 602 (67%) have adopted annually repeating Updated Service Credits. In addition, 471 (53%) of the cities have adopted annually repeating Annuity Increases.

However, the larger participating cities have almost all adopted annually repeating benefits. Therefore, of the 116,053 actively contributing Members, 92% are covered under an annually repeating Updated Service Credit benefit structure and 71% are covered under an annually repeating Annuity Increase structure.

Six cities began participation in the System during 2021. Exhibit VI in Section 1 of our Report shows these cities, the number of contributing Members, total payroll, and the 2023 retirement rates.

There were 64 cities which modified their pension benefit provisions since the prior valuation. Of these cities, 63 adopted changes which increased benefits, while 1 city adopted changes which decreased benefits. A summary of these changes is provided in Section 7 of our Report, and the impact on each city's calculated retirement rate is shown in Section 3. The aggregate benefit changes and six new cities increased the overall liability of the System by \$63.6 million.

Assumptions and methods

All actuarial assumptions and methods are described under Section 6 of our Report. The current actuarial assumptions were developed from the actuarial investigation of the experience of TMRS over the four-year period from December 31, 2014 to December 31, 2018. These assumptions were adopted by the Board in 2019 and were first used in the December 31, 2019 valuation. The Actuarial Experience Investigation Study report dated October 15, 2019 details the analysis and changes to assumptions.

Due to the increase in the SDB claims in 2021, the Board adopted changes to the assumptions and methodology used for calculating 2023 SDB rates as determined by this valuation. A margin for adverse experience was added to the calculation for 2023 only, as well as the removal of a credit to the SDB rate for active coverage equal to 2% of the fund balance. There have been no other changes in the actuarial assumptions or methods since the prior valuation.

The results of the actuarial valuation are dependent on the actuarial assumptions used. Actual results can and almost certainly will differ, as actual experience deviates from the assumptions. Even seemingly minor changes in the assumptions can materially change the liabilities, calculated contribution rates and funding periods. The actuarial calculations presented in our Report are intended to provide information for rational decision making. The actuarial assumptions and methods used in our Report comply with the actuarial standards of practice (ASOPs) and the parameters for disclosure that appear in Governmental Accounting Standards Board Statement Number 67.

Data

The TMRS staff supplied data for retired, active and inactive Members as of December 31, 2021. We did not audit this data, but we did apply a number of tests to the data, and we concluded that it was reasonable and consistent with the prior year's data. TMRS staff also supplied the asset and financial information as of December 31, 2021.

Actuarial Certification

This report is a summary of the actuarial valuation results. Additional detailed results are provided in the TMRS Annual Comprehensive Financial Report. All of our work conforms with generally accepted actuarial principles and practices, and with the Actuarial Standards of Practice issued by the Actuarial Standards Board. In our opinion, our calculations also comply with the requirements of the TMRS Act and, where applicable, the Internal Revenue Code and the Statements of the Governmental Accounting Standards Board.

The undersigned are independent actuaries. They are both Members of the American Academy of Actuaries, meet all of the Qualification Standards of the American Academy of Actuaries, and are experienced in performing valuations for large public retirement systems.

Respectfully submitted,

Gabriel, Roeder, Smith & Company

SECTION 3

RECONCILIATION OF FULL RETIREMENT RATES FROM PRIOR ACTUARIAL VALUATION REPORT

Section 3

Texas Municipal Retirement System

Reconciliation of Full Retirement Rates from Prior Actuarial Valuation Report

Actuarial valuations are based on long-term assumptions, and results in a specific year can, and almost certainly will, differ as actual plan experience deviates from the assumptions. The table at the end of this section provides a detailed breakdown of changes in each city's Full Retirement Rate (ADEC) from 2022 to 2023. A brief description of such changes is below.

Benefit Changes - Shows the increase or decrease in the contribution rate associated with any plan changes.

Assumption & Method Changes - Shows the increase or decrease in the contribution rate associated with actuarial assumption and method changes made, if any, as of the current valuation date and approved by the Board of Trustees.

Return on Actuarial Value of Assets (AVA) - Shows the change in the contribution rate associated with the return on the AVA being different than the assumed 6.75%. For the year ending December 31, 2021 the System-wide return on an AVA basis was 7.57%, but the returns will vary by city.

Contributions & Fully Amortized Prior Bases - Shows the total increase or decrease in the contribution rate associated with contributions different than the Full Retirement Rate, the contribution lag (see below), and the impact of the amortization bases which become fully amortized as of this valuation since payments for those bases are no longer part of the Prior Service Rate calculation. Contributions different from the Full Retirement Rate may include phase-in contributions, contributions in excess of the Full Retirement Rate, and/or lump sum contributions. The effect of the contribution lag refers to the time delay between the actuarial valuation date and the date the contribution rate becomes effective (i.e., the Actuarial Valuation as of December 31, 2021 sets the rate effective for 2023). This impact is expected to become immaterial once a city is contributing the Full Retirement Rate and the Full Retirement Rate stabilizes.

Payroll Growth - Shows the increase or decrease in the contribution rate associated with higher or lower than expected growth in the participating city's overall payroll. The amortization payments are calculated assuming payroll grows at a city's assumed rate each year. For most cities, the assumed payroll growth is 2.75%. Overall payroll growth greater (less) than the assumed rate will typically cause a decrease (increase) in the Prior Service Rate.

Normal Cost - Shows the increase or decrease in the contribution rate associated with changes in the average Normal Cost Rate for the individual city's active Members. The Normal Cost Rate for a Member is the contribution rate which, if applied to a Member's compensation throughout their period of anticipated covered service with the city, would be sufficient to meet all benefits payable on their behalf. The employer Normal Cost Rate is the pay-weighted average of the individual Normal Cost Rates less the Member Contribution Rate and will generally increase (decrease) as the average entry age of the group increases (decreases).

Liability Growth - Shows the increase or decrease in the contribution rate associated with larger or lower than expected growth in the city's overall plan liabilities than assumed. The most significant sources for variance will be turnover and individual salary increases differing from assumptions.

Distribution of Changes

Total Changes in Full Retirement Rate

Distribution of Changes

Change Due to Return on Actuarial Value of Assets

Distribution of Changes

Change Due to Contributions Different than Actuarial Rate and/or Fully Amortized Prior Bases

Distribution of Changes

Change Due to Payroll Growing Faster or Slower than Expected

Distribution of Changes

Change Normal Cost Rate

Distribution of Changes

Change Due to Liability Experience

SECTION 6

SUMMARY OF ACTUARIAL ASSUMPTIONS AND METHODS

Section 6

Texas Municipal Retirement System (“TMRS”) Summary of Actuarial Assumptions

These actuarial assumptions were developed primarily from the actuarial investigation of the experience of TMRS over the four year period from December 31, 2014 to December 31, 2018. They were adopted in 2019 and first used in the December 31, 2019 actuarial valuation. The post-retirement mortality assumption for Annuity Purchase Rates (APRs) is based on the Mortality Experience Investigation Study covering 2009 through 2011 and dated December 31, 2013. These assumptions apply to both the Pension Trust and the Supplemental Death Benefits Fund as applicable.

I. Economic Assumptions

- A. General Inflation – General Inflation is assumed to be 2.50% per year.

- B. Discount/Crediting Rates
 - 1. System-wide Investment Return Assumption: 6.75% per year, compounded annually, composed of an assumed 2.50% inflation rate and a 4.25% net real rate of return. This rate represents the assumed return, net of all investment and administrative expenses. This is the discount rate used to value the liabilities of the individual employers.

 - 2. For the Supplemental Death Benefits Fund, the rate is 4.25% per year, compounded annually, and derived as a blend of 5.00% for the portion of the benefits financed by advance funding contributions and a short-term interest rate for the portion of the benefits financed by current contributions.

 - 3. Assumed discount/crediting rate for Supplemental Disability Benefits Fund and individual employee accounts: an annual rate of 5.00% for (1) accumulating prior service credit and updated service credit after the valuation date, (2) accumulating the employee current service balances, (3) determining the amount of the monthly benefit at future dates of retirement or disability, and (4) calculating the actuarial liability of the system-wide Supplemental Disability Benefits Fund.

- C. Overall Payroll Growth – 2.75% per year, which is used to calculate the contribution rates for the retirement plan of each participating city as a level percentage of payroll. This represents the expected increase in total payroll. This increase rate is solely due to the effect of wage inflation on salaries, with no allowance for future membership growth. However, for cities with a decrease in the number of contributing members from 2008 to 2018, the payroll growth is decreased by half the annual percentage decrease in the count capped at a 1.0% decrease per year and rounded down to the nearest 0.1%.

D. Individual Salary Increases –

Salary increases are assumed to occur once a year, on January 1. Therefore, the pay used for the period year following the valuation date is equal to the reported pay for the prior year, increased by the salary increase assumption. Salaries are assumed to increase by the following graduated service-based scale.

<u>Years of Service</u>	<u>Rate (%)</u>
1	11.50%
2	7.25%
3	6.75%
4	6.25%
5	6.00%
6	5.75%
7	5.50%
8	5.25%
9	5.00%
10	4.75%
11-12	4.50%
13-15	4.25%
16-20	4.00%
21-24	3.75%
25 +	3.50%

- E. Annuity Increase – The Consumer Price Index (CPI) is assumed to be 2.50% per year prospectively. Annuity Increases, when applicable, are 30%, 50%, or 70% of CPI, according to the provisions adopted by each city. The actual future COLA assumptions are as follows: 0.87% per year for the 30% CPI provision, 1.38% per year for the 50% CPI provision, and 1.86% per year for the 70% CPI provision.
- F. Load for Updated Service Credit – To reflect the asymmetric nature of the credits due to the USC provision, there is a load on the final average earnings used in the calculation of 0.1% per year into the future that the calculation is performed.

II. Demographic Assumptions

A. Termination Rates

1. For the first 10 years of service, the base table rates vary by gender, entry age, and length of service. For each city the base table is then multiplied by 75% to 125%. A further multiplier is applied depending on an employee's classification: 1) Fire – 68%, 2) Police – 86%, or 3) Other – 108%. A sample of the base rates follows:

Males

Age	Service									
	0	1	2	3	4	5	6	7	8	9
20	0.3079	0.2766	0.2305	0.2037	0.1951	0.1764	0.1612	0.1311	0.1078	0.0860
25	0.2798	0.2393	0.1911	0.1638	0.1507	0.1336	0.1210	0.1060	0.0976	0.0798

65	0.2236	0.1454	0.1372	0.1169	0.0813	0.0871	0.0678	0.0603	0.0281	0.0285
70	0.2236	0.1471	0.1372	0.1173	0.0813	0.0868	0.0675	0.0611	0.0308	0.0303

2. After 10 years of service, base termination rates vary by gender and by the number of years remaining until first retirement eligibility. For each city the base table is then multiplied by 75% to 125%. A further multiplier is applied depending on an employee's classification: 1) Fire – 54%, 2) Police – 83%, or 3) Other – 113%. A sample of the base rates follows:

Years from Retirement	Male	Female
1	1.82%	2.34%
2	2.43%	3.15%
3	2.87%	3.75%
4	3.24%	4.25%
5	3.55%	4.67%
6	3.83%	5.06%
7	4.08%	5.40%
8	4.32%	5.72%
9	4.53%	6.02%
10	4.74%	6.30%
11	4.93%	6.57%
12	5.11%	6.82%
13	5.28%	7.06%
14	5.45%	7.28%
15	5.60%	7.50%

Termination rates end at first eligibility for retirement

- B. Forfeiture Rates (Withdrawal of Member Deposits from TMRS) for vested members vary by age and employer match, and they are expressed as a percentage of the termination rates shown in (A). The withdrawal rates for cities with a 2-to-1 match are shown below. 4% is added to the rates for 1½-to-1 cities, and 8% is added for 1-to-1 cities.

Age	Percent of Terminating Employees Choosing to Take a Refund
25	40.2%
30	40.2%
35	40.2%
40	37.0%
45	31.6%
50	26.1%
55	20.7%

Forfeiture rates end at first eligibility for retirement.

C. Service Retirees and Beneficiary Mortality Rates

For calculating the actuarial liability and the retirement contribution rates, the Gender-distinct 2019 Municipal Retirees of Texas mortality tables. The rates are projected on a fully generational basis by Scale UMP to account for future mortality improvements. The life expectancies for a 65 year old retiree (including projection) are as follows:

Life Expectancy for an Age 65 Retiree (in Years)					
Gender	Year of Retirement				
	2020	2025	2030	2035	2040
Male	19.7	20.1	20.5	20.9	21.3
Female	23.2	23.6	24.0	24.3	24.7

D. Disabled Annuitant Mortality Rates

For calculating the actuarial liability and the retirement contribution rates, the mortality tables for healthy retirees is used with a 4 year set-forward for males and a 3 year set-forward for females. In addition, a 3.5% and 3% minimum mortality rate will be applied to reflect the impairment for younger members who become disabled for males and females, respectively. The rates are projected on a fully generational basis by Scale UMP to account for future mortality improvements subject to the floor.

E. Pre-Retirement Mortality

For calculating the actuarial liability and the retirement contribution rates, the PUB(10) mortality tables, with the Public Safety table used for males and the General Employee table used for females. The rates are projected on a fully generational basis by Scale UMP to account for future mortality improvements.

F. Annuity Purchase Rates

For determining the amount of the monthly benefit at the time of retirement for both healthy and disabled annuitants, the annuity purchase rates (APRs) until 2027 are based on a mortality study performed in 2013, with the factors phasing into being based on a unisex blend of the RP-2000 Combined Healthy Mortality Tables with Blue Collar Adjustment for males and females with both male and female rates multiplied by 107.5% and projected on a fully generational basis with scale BB. The current table of APRs is explicitly valued through 2032 and then it is assumed the APRs and the valuation mortality assumptions will be consistent over time. For members, a unisex blend of 70% of the males table and 30% of the female table is used, while 30% of the male table and 70% of the female table is used for beneficiaries.

G. Disability Rates

Age	Males & Females
20	0.000003
25	0.000019
30	0.000074
35	0.000194
40	0.000371
45	0.000603
50	0.000891
55	0.001235
60	0.001635
65	0.002090

H. Service Retirement Rates, applied to both Active and Inactive Members

The base table rates vary by age. For members under the age of 62, these rates are then multiplied by 2 factors based on 1) employee contribution rate and employer match and 2) if the city has a recurring COLA.

Age	
<50	0.05
50-51	0.07
52-54	0.08
55-59	0.13
60	0.16
61	0.17
62	0.25
63-64	0.20
65-74	0.30
75 and over	1.00

Note: For cities without a 20-year/any age retirement provision, the rates are loaded by 50% for ages 60 & below with 25 or more years of service.

Plan Design Factors Applied to Base Retirement Rates

Employer Match	Employee Contribution Rate		
	5%	6%	7%
1 - 1	0.75	0.80	0.84
1.5 - 1	0.81	0.86	0.92
2 - 1	0.86	0.93	1.00

Recurring COLA: 100%

No Recurring COLA: 95%

III. Methods and Assumptions

- A. Valuation of Assets – The actuarial value of assets is based on the market value of assets with a ten-year phase-in of actual investment return in excess of (less than) expected investment income. Offsetting unrecognized gains and losses are immediately recognized, with the shortest remaining bases recognized first and the net remaining bases continue to be recognized on their original timeframe. The actuarial value of assets is further adjusted by 33% of any difference between the initial value and a 12% corridor around the market value of assets, if necessary.
- B. Actuarial Cost Method: The actuarial cost method being used is known as the Entry Age Normal Actuarial Cost Method. The Entry Age Normal Actuarial Cost Method develops the annual cost of the Plan in two parts: that attributable to benefits accruing in the current year, known as the normal cost, and that due to service earned prior to the current year, known as the amortization of the unfunded actuarial accrued liability. The normal cost and the actuarial accrued liability are calculated individually for each member. The normal cost rate for an employee is the contribution rate which, if applied to a member’s compensation throughout their period of anticipated covered service with the City, would be sufficient to meet all benefits payable on their behalf. The normal cost is calculated using an entry age based on benefit service with the current city. If a member has additional time-only vesting service through service with other TMRS cities or other public agencies, they retain this for determination of benefit eligibility and decrement rates. The salary-weighted average of these rates is the total normal cost rate. The unfunded actuarial accrued liability reflects the difference between the portion of projected benefits attributable to service credited prior to the valuation date and assets already accumulated. The unfunded actuarial accrued liability is paid off in accordance with a specified amortization procedure outlined in C below.
- C. Amortization Policy: For “underfunded” cities the amortization as of the valuation date is a level percentage of payroll over a closed period using the process of “laddering”. Bases that existed prior to this valuation continue to be amortized on their original schedule. Beginning December 31, 2020, new loss bases for cities with fifteen or more employees are amortized over individual periods of not more than 20 years. New gains (including lump sum contributions) are offset against and amortized over the same period as the current largest outstanding loss base for the specific City which in turn decreases contribution rate volatility.

Once a City reaches an “overfunded” status, all prior bases are erased and an amount of the surplus is credited against the contribution rate to keep the funded ratio constant year over year.

Ad hoc benefit enhancements are amortized over individual periods using a level dollar policy. The period will be based on the minimum of 12 years or the current life expectancy of the covered group. However, if the non-ad hoc (level percent) amortization factor is smaller due to a shorter amortization period based on the employer's size, as described below, ad hoc enhancements will be amortized the same as any other loss.

- D. Small City Methodology – For cities with fewer than twenty employees, more conservative methods and assumptions are used. First, lower termination rates are used for smaller cities, with maximum multipliers of 75% for employers with less than 6 members, 85% for employers with 6 to 10 members, 100% for employers with 11 to 15 members, and 115% for employers with less than 100 members.

There is also a load on the life expectancy for employers with less than 15 active members. The life expectancy will be loaded by decreasing the mortality rates by 1% for every active member less than 15. For example, an employer with 5 active members will have the baseline mortality tables multiplied by 90% (10 active members times 1%).

For underfunded plans, the maximum period for amortizing losses is decreased by 1 year for each active member less than the 15 member threshold. For example, an employer with 8 active members and a current maximum amortization period of 20 will use $(20 - (15 - 8)) = 13$ year amortization period for a loss in that year's valuation. Under this policy, the lowest amortization period will be $20 - (15 - 1) = 6$ years. Once the plan is overfunded, the amortization period will revert back to the standard policy.

- E. Supplemental Death Benefit Fund – The contribution rate for the Supplemental Death Benefit (SDB) is equal to the expected benefit payments during the upcoming year divided by the annualized pay of current active members and is calculated separately for actives and retirees. The SDB rate for retiree coverage is equal to the expected term cost.

Given that SDB claims rose significantly in 2021, the TMRS Board adopted a margin for adverse experience applicable for the 2023 SDB rates. A load equal to 2.0 and 1.1 is applied to the term cost for active coverage and retiree coverage, respectively, and is applicable for the contribution rates for 2023 only. Additionally, for 2023 rates, the small credit previously applied to the SDB rate for active coverage was removed.

IV. Other Assumptions

1. Valuation payroll (used for determining the amortization contribution rate): A weighted average of the actual payroll during the prior fiscal years, with 33% weight given to the most recent year and 67% weight given to the expected payroll for the previous fiscal year, moved forward with one year's payroll growth rate and adjusted for changes in population.

2. Individual salaries used to project benefits: For members with more than three years of service, actual salaries from the past three fiscal years are used to determine the USC final average salary as of the valuation date. For future salaries, this three-year average is projected forward with two years of salary scale to create the salary for the year following the valuation. This value is then projected with normal salary scales.
3. Timing of benefit payments: Benefit payments are assumed to be made in the middle of the month. Although TMRS benefits are paid at the end of the month, eligibility for that payment is determined at the beginning of the month. A middle of month payment approximates the impact of the combination of eligibility determination and actual payment timing.
4. Percent married: 100% of the employees are assumed to be married.
5. Age difference: Male members are assumed to be three years older than their spouses, and female members are assumed to be three years younger than their spouses.
6. Optional Forms: All healthy and disabled members are assumed to choose a 50% Joint and Survivor option when they retire. For healthy members, this is approximated by reducing the benefit payment by a factor equal to 2.1% at age 60 (with adjustments by age). The 2.1% is effective for the 2019 calendar year and will reduce by 10% each year until the phase into the APR rates is complete, at which time there will be no need for such factor.
7. Percent electing annuity on death (when eligible): For vested members not eligible for retirement, 75% of the spouses of male members and 70% of the spouses of female members are assumed to commence an immediate benefit in lieu of a deferred annuity or a refund. Those not electing an immediate benefit are assumed to take a refund. All of the spouses of married participants who die after becoming eligible for a retirement benefit are assumed to elect an annuity that commences immediately.
8. Partial Lump Sum Utilization: It is assumed that each member at retirement will withdraw 40% of their eligible account balance.
9. Inactive Population: All non-vested members of a city are assumed to take an immediate refund if they are not contributing members in another city. Vested members not contributing in another city are assumed to take a deferred retirement benefit, except for those who have terminated in the past 12 months for whom one year of forfeiture probability is assumed. The forfeiture rates for inactive members of a city who are contributing members in another city are equal to the probability of termination multiplied by the forfeiture rates shown in II(A) and II(B) respectively. These rates are applied each year until retirement eligibility. Once a member is retirement eligible, they are assumed to commence benefits based on the service retirement rates shown in II(H).
10. There will be no recoveries once disabled.

11. No surviving spouse will remarry and there will be no children's benefit.
12. Decrement timing: Decrements of all types are assumed to occur mid-year.
13. Eligibility testing: Eligibility for benefits is determined based upon the age nearest birthday and service nearest whole year on the date the decrement is assumed to occur.
14. Decrement relativity: Decrement rates are used directly from the experience study, without adjustment for multiple decrement table effects.
15. Incidence of Contributions: Contributions are assumed to be received continuously throughout the year based upon the computed percent of payroll shown in this report, and the actual payroll payable at the time contributions are made.
16. Benefit Service: All members are assumed to accrue 1 year of eligibility service each year.
17. The decrement rates for service related decrements are based on total TMRS eligibility service.

V. Participant Data

Participant data was supplied in electronic text files. There were separate files for (i) active and inactive members, and (ii) members and beneficiaries receiving benefits.

The data for active members included birthdate, gender, service with the current city and total vesting service, salary, employee contribution account balances, as well as the data used in the next calculation of the Updated Service Credit (USC). For retired members and beneficiaries, the data included date of birth, gender, spouse's date of birth (where applicable), amount of monthly benefit, date of retirement, form of payment code, and aggregate increase in the CPI that will be used in the next calculation of the cost of living adjustment.

To the extent possible we have made use of all available data fields in the calculation of the liabilities stated in this report. Actual CPI is used to model the wear-away effect or "catch-up" when a city changes its COLA provisions. Adjustments are made for members who have service both in a city with "20 and out" retirement eligibility and one that hasn't adopted it to calculate the earliest possible retirement date.

Salary supplied for the current year was based on the annualized earnings for the year preceding the valuation date.

Assumptions were made to correct for missing, bad, or inconsistent data. These had no material impact on the results presented.

SECTION 7

SUMMARY OF BENEFIT PROVISIONS

Section 7

Texas Municipal Retirement System Summary of Plan Benefit Provisions

The plan provisions are adopted by the governing body of each city, within the options available in the state statutes governing TMRS. Members in most cities can retire at age 60 and above with 5 or more years of service or with 20 years of service regardless of age. Some cities have elected retirement eligibility at age 60 with 10 years of service and/or with 25 years of service regardless of age. Most plans also provide death benefits and all provide disability benefits. Effective January 1, 2002, Members are vested after 5 years, unless a city opted to maintain 10-year vesting. Members may work for more than one TMRS city during their career. If an individual has become vested in one TMRS city, he or she is immediately vested upon employment with another TMRS city. Similarly, once a Member has met the eligibility requirements for retirement in a TMRS city, he or she is eligible in other TMRS cities as well.

Upon retirement, benefits depend on the sum of the Member's contributions, with interest, and the city-financed monetary credits, with interest. City-financed monetary credits are composed of three sources: Prior Service Credits, Current Service Credits, and Updated Service Credits. The available Member contribution rates are 5%, 6%, or 7% (some cities were grandfathered at a 3% rate), while the city's matching ratio will be 100%, 150%, or 200%. The balance at the beginning of each year is granted an interest credit as determined by the Board (Member account balances are guaranteed at least 5% interest).

- **Prior Service Credits:** At the inception of each city's plan, the city granted monetary credits for service rendered before the plan began of a percentage, adopted by the city, of a theoretical amount at least equal to two times what would have been contributed by the Member, with interest (3% annual), prior to establishment of the plan.
- **Current Service Credits:** Monetary credits for service since each plan began are a percent of the Member's accumulated contributions based on the city's matching rate in effect at the time the Member contributions are made.
- **Updated Service Credit (USC):** This monetary credit is determined by recalculating the Member's account balance by assuming that the current Member contribution rate of the currently employing city has always been in effect to create a hypothetical balance. The computation also assumes that the Member's salary has always been the Member's average salary during the 36-month period ending 13 months before the effective date of calculation. This hypothetical account balance is increased by 3% each year (not the actual interest credited to Member accounts in previous years), and increased by the city match currently in effect. The resulting sum is then compared to the Member's actual account

balance increased by the actual city match and actual interest credited. If the hypothetical balance exceeds the actual balance and the difference between them exceeds the current USC or Prior Service Credit, the Member is granted a monetary credit (the new USC) equal to the difference between the hypothetical balance and the actual balance. The calculation may be done on a repeating or an ad hoc basis.

At retirement, the benefit is calculated as if the sum of the Member's contributions with interest and the city-financed monetary credits with interest were used to purchase an annuity. Members may choose to receive their retirement benefit in one of seven payment options: retiree life only; one of three lifetime survivor options; or one of three guaranteed term options. Members may also choose to receive a portion of their benefit as a Partial Lump Sum Distribution (PLSD) in an amount equal to 12, 24, or 36 monthly payments under the retiree life only option, which cannot exceed 75% of the total Member contributions and interest. A participating city may elect to increase the annuities of its retirees, either annually or on an annually repeating basis, effective January 1 of a calendar year. Cities may adopt annuity increases at a rate equal to either 30%, 50%, or 70% of the increase (if any) in the Consumer Price Index — all Urban Consumers (CPI-U) between the December preceding the Member's retirement date and the December 13 months before the effective date of the increase, minus any previously granted increases.

Section 7

Texas Municipal Retirement System

Summary of Benefit Provision Changes Reflected in 12/31/2021 Valuation

City	Changes
Anahuac	Adopted 20 yr, any age retirement eligibility.
Andrews	Adopted 5 year vesting.
Arcola	Adopted restricted prior service credit. *
Arp	1) Increased city matching ratio from 1 - 1 to 1.5 - 1. 2) Increased statutory max to 11.50% due to plan changes. 3) Adopted buy-back provision. *
Balcones Heights	Adopted 30% repeating COLA.
Ballinger	1) Increased Member contribution rate from 5% to 7%. 2) Adopted buy-back provision. * 3) Removed statutory max.
Breckenridge	Adopted restricted prior service credit. *
Brenham	Adopted 70% repeating COLA.
Bridge City	Adopted buy-back provision. *
Bullard	1) Increased Member contribution rate from 6% to 7%. 2) Removed statutory max.
Cactus	Adopted 100% repeating USC with transfer.
Calvert	1) Adopted 100% repeating USC with transfer. 2) Adopted 70% repeating COLA. 3) Increased Member contribution rate from 5% to 7%. 4) Increased city matching ratio from 1 - 1 to 2 - 1.
Chandler	Increased city matching ratio from 1.5 - 1 to 2 - 1.
Cottonwood Shores	1) Adopted 100% repeating USC with transfer. 2) Increased Member contribution rate from 5% to 6%.
De Leon	1) Increased city matching ratio from 1 - 1 to 1.5 - 1. 2) Increased statutory max to 9.50% due to plan changes.
Eustace	Adopted 20 yr, any age retirement eligibility.
Everman	Adopted buy-back provision. *
Floresville	Adopted buy-back provision. *
Grandview	Adopted buy-back provision. *
Gun Barrel City	1) Increased Member contribution rate from 5% to 7%. 2) Increased statutory max to 13.50% due to plan changes.
Gunter	1) Adopted 100% repeating USC with transfer. 2) Adopted 70% repeating COLA. 3) Increased Member contribution rate from 5% to 7%.
Hallsville	1) Increased Member contribution rate from 5% to 7%. 2) Increased city matching ratio from 1 - 1 to 1.5 - 1.
Harlingen	1) Granted 50% ad hoc USC with transfer. 2) Reopened plan to all current and future employees.
Harlingen Waterworks Sys	1) Granted 50% ad hoc USC with transfer. 2) Increased city matching ratio from 1 - 1 to 2 - 1. 3) Reopened plan to all current and future employees.
Hedwig Village	Increased Member contribution rate from 5% to 7%.
Hitchcock	1) Adopted 50% repeating USC with transfer. 2) Adopted 20 yr, any age retirement eligibility. 3) Increased Member contribution rate from 5% to 6%. 4) Increased statutory max to 12.50% due to plan changes.
Holliday	1) Granted 100% ad hoc USC with transfer. 2) Increased Member contribution rate from 5% to 7%. 3) Removed statutory max.
Horizon City	Adopted restricted prior service credit. *
Howe	Adopted 20 yr, any age retirement eligibility.
Huntsville	Increased repeating USC from 50% to 75%.

* Reflects possible rate impact. No change to current rate.

Section 7

Texas Municipal Retirement System

Summary of Benefit Provision Changes Reflected in 12/31/2021 Valuation

City	Changes
Hurst	1) Granted 30% ad hoc COLA.
Hutchins	2) Adopted buy-back provision. *
Huxley	1) Decreased repeating USC from 100% to 50%. 2) Decreased repeating COLA from 70% to 30%. 3) Increased city matching ratio from 1.5 - 1 to 2 - 1. 4) Increased statutory max to 13.50% due to plan changes.
Jacinto City	1) Granted 50% ad hoc USC with transfer.
Kenedy	2) Granted 30% ad hoc COLA. 3) Adopted 20 yr, any age retirement eligibility. 4) Increased city matching ratio from 1.5 - 1 to 2 - 1. 5) Increased statutory max to 11.50% due to plan changes. Increased Member contribution rate from 5% to 6%.
Kountze	1) Adopted 20 yr, any age retirement eligibility. 2) Increased city matching ratio from 1 - 1 to 2 - 1. 3) Increased statutory max to 11.50% due to plan changes.
La Vernia	1) Adopted 50% repeating USC.
Lavon	2) Adopted 30% repeating COLA. 3) Increased city matching ratio from 1 - 1 to 1.5 - 1. Adopted restricted prior service credit. *
Leonard	1) Adopted 100% repeating USC with transfer. 2) Adopted 70% repeating COLA.
Little Elm	1) Increased city matching ratio from 1 - 1 to 1.5 - 1. 2) Increased statutory max to 11.50% due to plan changes.
Longview	Removed statutory max.
Manvel	Granted 50% ad hoc COLA.
Marble Falls	1) Granted 100% ad hoc USC with transfer. 2) Granted 70% ad hoc COLA. 3) Adopted restricted prior service credit. *
McGregor	1) Adopted 30% repeating COLA. 2) Adopted buy-back provision. *
Meadows Place	3) Increased statutory max to 15.50% due to plan changes.
Melissa	1) Increased Member contribution rate from 6% to 7%.
Mesquite	2) Increased statutory max to 13.50% due to plan changes.
Missouri City	1) Granted 100% ad hoc USC. 2) Granted 70% ad hoc COLA.
Mount Enterprise	Adopted 70% repeating COLA.
New Fairview	Granted 50% ad hoc COLA.
Nolanville	1) Granted 100% ad hoc USC with transfer. 2) Granted 70% ad hoc COLA.
Paris	Increased Member contribution rate from 5% to 7%.
Parker	Increased city matching ratio from 1 - 1 to 2 - 1.
Pharr	1) Increased city matching ratio from 1 - 1 to 2 - 1. 2) Adopted restricted prior service credit. *
Port Isabel	Increased Member contribution rate from 6% to 7%.
Port Neches	Removed statutory max.
Portland	Adopted 100% repeating USC.
	1) Increased Member contribution rate from 5% to 7%.
	2) Increased statutory max to 11.50% due to plan changes.
	Granted 30% ad hoc COLA.
	1) Adopted 5 year vesting.
	2) Increased Member contribution rate from 6% to 7%.
	3) Adopted restricted prior service credit. *

* Reflects possible rate impact. No change to current rate.

Section 7

Texas Municipal Retirement System

Summary of Benefit Provision Changes Reflected in 12/31/2021 Valuation

City	Changes
Post	Increased repeating USC from 50% to 100%.
Pottsboro	Adopted restricted prior service credit. *
Quinlan	Adopted 20 yr, any age retirement eligibility.
Ralls	Adopted 20 yr, any age retirement eligibility.
San Antonio	1) Granted 70% ad hoc COLA. 2) Opened plan to current and future San Antonio Council Aides Corporation employees.
Simonton	1) Increased Member contribution rate from 5% to 7%. 2) Increased city matching ratio from 1 - 1 to 2 - 1.
Splendora	1) Granted 100% ad hoc USC with transfer. 2) Increased city matching ratio from 1 - 1 to 2 - 1. 3) Adopted restricted prior service credit. *
Sudan	1) Granted 100% ad hoc USC with transfer. 2) Granted 70% ad hoc COLA.
Sulphur Springs	Granted 100% ad hoc USC with transfer.
Surfside Beach	1) Increased city matching ratio from 1 - 1 to 2 - 1. 2) Increased statutory max to 13.50% due to plan changes.
Tahoka	Adopted 100% repeating USC with transfer.
Tioga	1) Increased city matching ratio from 1 - 1 to 1.5 - 1. 2) Increased statutory max to 11.50% due to plan changes.
Trinidad	1) Adopted 100% repeating USC. 2) Increased Member contribution rate from 5% to 7%. 3) Increased city matching ratio from 1 - 1 to 2 - 1. 4) Increased statutory max to 13.50% due to plan changes.
Uvalde	1) Increased city matching ratio from 1.5 - 1 to 2 - 1. 2) Increased statutory max to 11.50% due to plan changes.
Van Alstyne	1) Increased Member contribution rate from 6% to 7%. 2) Increased statutory max to 13.50% due to plan changes.
Waller	1) Increased Member contribution rate from 5% to 7%. 2) Increased city matching ratio from 1.5 - 1 to 2 - 1. 3) Increased statutory max to 13.50% due to plan changes.
Waskom	1) Increased Member contribution rate from 5% to 7%. 2) Increased city matching ratio from 1 - 1 to 2 - 1. 3) Removed statutory max.
Weslaco	1) Granted 50% ad hoc USC with transfer. 2) Granted 30% ad hoc COLA.

* Reflects possible rate impact. No change to current rate.

SECTION 8

RISKS ASSOCIATED WITH MEASURING THE ACCRUED LIABILITY AND ACTUARIALLY DETERMINED CONTRIBUTION

Section 8

Texas Municipal Retirement System

Risks Associated With Measuring the Accrued Liability and Actuarially Determined Contribution

The determination of the Accrued Liability and the Actuarially Determined Contribution (ADC) requires the use of assumptions regarding future economic and demographic experience. Risk measures, as illustrated in this report, are intended to aid in the understanding of the effects of future experience differing from the assumptions used in the course of the actuarial valuation. Risk measures may also help with illustrating the potential volatility in the Accrued Liability and the ADC that results from the differences between actual experience and the actuarial assumptions.

Future actuarial measurements may differ significantly from the current measurements presented in this report due to such factors as the following: plan experience differing from that anticipated by the economic or demographic assumptions; changes in economic or demographic assumptions due to changing conditions; increases or decreases expected as part of the natural operation of the methodology used for these measurements (such as the end of an amortization period, or additional cost or contribution requirements based on the Plan's funded status); and changes in plan provisions or applicable law. The scope of an actuarial valuation does not include an analysis of the potential range of such future measurements.

Examples of risk that may reasonably be anticipated to significantly affect the plan's future financial condition include:

1. Investment risk – actual investment returns may differ from the expected returns;
2. Asset/Liability mismatch – changes in asset values may not match changes in liabilities, thereby altering the gap between the Accrued Liability and Assets and consequently altering the funded status and contribution requirements;
3. Contribution risk – actual contributions may differ from expected future contributions. For example, actual contributions may not be made in accordance with the plan's funding policy or material changes may occur in the anticipated number of covered employees, covered payroll, or other relevant contribution base;
4. Salary and Payroll risk – actual salaries and total payroll may differ from expected, resulting in actual future Accrued Liability and contributions differing from expected;
5. Longevity risk – Members may live longer or shorter than expected and receive pensions for a period of time other than assumed;
6. Other demographic risks – Members may terminate, retire or become disabled at times or with benefits other than assumed resulting in actual future Accrued Liability and contributions differing from expected.

The effects of certain trends in experience can generally be anticipated. For example, if the investment return since the most recent actuarial valuation is less (or more) than the assumed rate, the cost of the plan can be

expected to increase (or decrease). Likewise if longevity is improving (or worsening), increases (or decreases) in cost can be anticipated.

The computed contribution rates shown in this report may be considered as a minimum contribution rate that complies with the Board’s funding policy and state statute. The timely receipt of the ADC is critical to support the financial health of the plan. Users of this report should be aware that contributions made at the actuarially determined rate do not necessarily guarantee benefit security.

With each valuation there is a presentation of the summary of findings to the Board. Included are various discussions and scenarios of potential risks.

Investment Risk Scenario Testing - Benefit Accumulation Fund (Smoothed)

The funded status and ADC are based on numerous actuarial assumptions that have been selected based on the System’s past experience and future expectations, including the expected annual investment return of 6.75%. The basis for the 6.75% investment return assumption has been detailed in Section 6 of this report.

The following table illustrates the projected Funded Ratio and ADC over the next five years assuming alternative investment returns on the Market Value of Assets. The projections are based on actuarial assumptions (other than investment returns), methods and plan provisions used in this valuation.

Three scenarios of projected results are shown assuming annual net investment returns equal to:

1. The expected 25th percentile annual investment return over a 10-year period, based on the assumed investment return of 6.75% and an assumed standard deviation of 10.6% (approximately 4.50% per year)
2. The annual investment return assumed in this valuation of 6.75%
3. The expected 75th percentile annual investment return over a 10-year period, based on the assumed investment return of 6.75% and an assumed standard deviation of 10.6% (approximately 9.00% per year)

	Projected Investment Return					
	4.50%		6.75%		9.00%	
December	Funded Ratio	ADC	Funded Ratio	ADC	Funded Ratio	ADC
2021	90.5%	13.25%	90.5%	13.25%	90.5%	13.25%
2022	91.4%	13.08%	91.6%	13.00%	91.8%	12.93%
2023	92.3%	12.98%	92.9%	12.73%	93.5%	12.49%
2024	92.8%	12.95%	94.2%	12.41%	95.4%	11.91%
2025	93.2%	12.96%	95.4%	12.04%	97.5%	11.18%
2026	93.3%	13.10%	96.5%	11.71%	99.7%	10.36%

In the 4.50% scenario, which assumes the actual returns on a market basis are less than the 6.75% assumed return, the ADC increases over the period are muted due to recognizing the currently deferred investment gains from calendar years 2019, 2020, and 2021. However, the combination of the funding policy (closed amortization strategy) and deferred gain recognition continues to increase the Funded Ratio.

Plan Maturity Measures

Risks facing a pension plan evolve over time. A young plan with virtually no investments and paying few benefits may experience little investment risk. An older plan with a large number of Members in payment status and a significant trust may be much more exposed to investment risk. Generally accepted plan maturity measures include the following:

Aggregate Benefit Accumulation Fund Results		
	2021	2020
Ratio of the Market Value of Assets to Payroll	5.2	4.7
Ratio of Actuarial Accrued Liability to Payroll	5.4	5.2
Ratio of Active Members to Retirees and Beneficiaries	1.5	1.6
Net Cash Flow as a Percentage of Market Value of Assets	-0.4%	0.2%
Duration of Liabilities	17.4	17.8
Average Change in Contribution Rate with 10% Decline in Assets (Smoothed)	0.34%	0.33%
Average Change in Contribution Rate with 10% Decline in Assets (Unsmoothed)	3.41%	3.30%

Ratio of Market Value of Assets to Payroll: The relationship between assets and payroll is a useful indicator of the potential volatility of contributions. For example, if the Market Value of Assets is 4 times the payroll, a return on assets 5% different than assumed would equal 20% of payroll. A higher (lower) or increasing (decreasing) level of this maturity measure generally indicates a higher (lower) or increasing (decreasing) volatility in city contributions as a percentage of payroll.

Ratio of Actuarial Accrued Liability to Payroll: The ratio of liability to payroll may also be used as a measure of sensitivity of the liability itself. For example, if the Actuarial Accrued Liability is 5 times the payroll, a change in liability 2% other than assumed would equal 10% of payroll. A higher (lower) or increasing (decreasing) level of this maturity measure generally indicates a higher (lower) or increasing (decreasing) volatility in liability (and also city contributions) as a percentage of payroll.

The relationship between the Actuarial Accrued Liability and payroll is a useful indicator of the potential longer term asset-related volatility once the current UAAL is fully amortized. A funding policy that targets a funded ratio of 100% is expected to result in the ratio of assets to payroll and the ratio of liability to payroll converging over time.

Ratio of Active Members to Retirees and Beneficiaries: A young plan with many active Members and few retirees will have a high ratio of active Member to retirees. A mature open plan may have close to the same number of active Members to retirees resulting in a ratio near 1. A very mature or closed plan may have significantly more retirees than active Members resulting in a ratio below 1.

Net Cash Flow as a Percentage of Market Value of Assets: A positive net cash flow means contributions exceed benefits and expenses. A negative cash flow means existing funds are being used to make payments. A certain amount of negative net cash flow is generally expected to occur when benefits are prefunded through a qualified trust. Large negative net cash flows as a percent of assets may indicate a very mature plan or a need for additional contributions.

Duration of Liabilities: The duration of the Present Value of Future Benefits (PVFB) may be used to approximate the sensitivity to a 1% change in the assumed rate of return. For example, duration of 10 indicates that the PVFB would increase approximately 10% if the assumed rate of return were lowered 1%.

Change in Contribution Rate with 10% Decline in Assets (Smoothed): This shows the rate impact in one year if the Actuarial Value of Assets (AVA) was 10% lower than in the current actuarial valuation with the asset loss smoothed over a 10-year period as is done in the system-wide calculation of the AVA.

Change in Contribution Rate with 10% Decline in Assets (Unsmoothed): This shows the rate impact if the Actuarial Value of Assets was 10% lower than in the current actuarial valuation with the full asset loss recognized in the current valuation.
