## Section 1

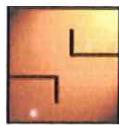

### ***Introduction***

The City of Pharr 2007 Street Inventory is a study prepared by J.E. Saenz & Associates, Inc. in order to develop and maintain a condition-rating inventory of the City of Pharr street system. The Street Inventory is to assist staff in making recommendations of maintenance and improvements to the street system.

A rating system was developed and modeled after studies done by other cities and uses a method derived from a publication of the Asphalt Institute based on visual criteria while incorporating criteria from other organizations such as AASHTO and TXDOT. The rating system establishes a maximum value of 100 for newly constructed streets. As a street ages and deteriorates, the condition rating decreases. Using the rating system to give a ranking to the streets in the City of Pharr, a series of reports were composed to easily navigate through the data.

An additional element of this study includes the analysis of the latest construction costs to determine cost estimates to refurbish or reconstruct current streets according to their respective rating. Cost estimates for all the streets may be found in the *Subdivisions with Estimates Listing* and *Thoroughfare Listing*.

Each section below outlines in further detail every aspect of this study along with explanations of the previously mentioned listings.

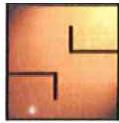

## Section 2

### A Pavement Rating System for Low-Volume Asphalt Roads

The Street Inventory is developed from suggestions in the publication of the Asphalt Institute. A copy of the publication is included in this section of the report. We have grouped the ratings into the following categories:

<u>Rating Condition</u>	<u>General Description</u>
100 – 90 <b>Excellent</b>	Routine maintenance.
89 - 80 <b>Good</b>	Minor cracks requiring crack sealing; cosmetic deterioration of curbs and joints; weed kill necessary.
79 - 70 <b>Fair</b>	Major cracks with significant deterioration; alligator cracking with minor potholes and subgrade deterioration; requires patching and overlay.
69 - 0 <b>Poor</b>	Significant potholes; complete surface deterioration; misaligned curbs and pavement; requires major base surface repairs and realignment of riding surface; complete pavement system failure; exhibits bad riding quality, numerous potholes, pavement heaving, and water ponding.

## Section 3

### ***Street Condition Trends***

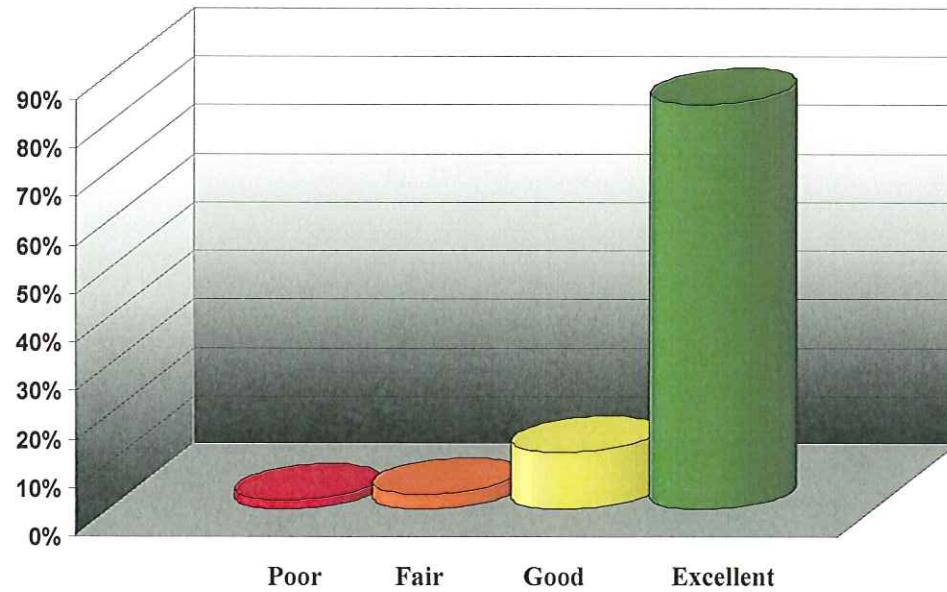

In order to represent the cumulative efforts of The Street Inventory and the data collected, the following analysis has been composed to facilitate a better understanding of the street system in Pharr.

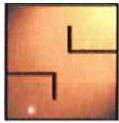

#### *Average Rating*

The average rating per square foot was calculated to be approximately a 93 and shows the overall condition of the City of Pharr street system. Using each street's Condition Rating, Square Footage, and the Total Square Footage of the system an equation was derived and is shown below along with a graphical representation of the percentage distribution of ratings to streets.

$$AVG. RATING = \sum \left[ \left( \frac{\text{Condition Rating}}{\text{of Street}} \right) \left( \frac{\text{Sq. Footage of Street}}{\text{Total Sq. Footage of System}} \right) \right]$$

**Percentage Distribution of Street System**

### Street System Information

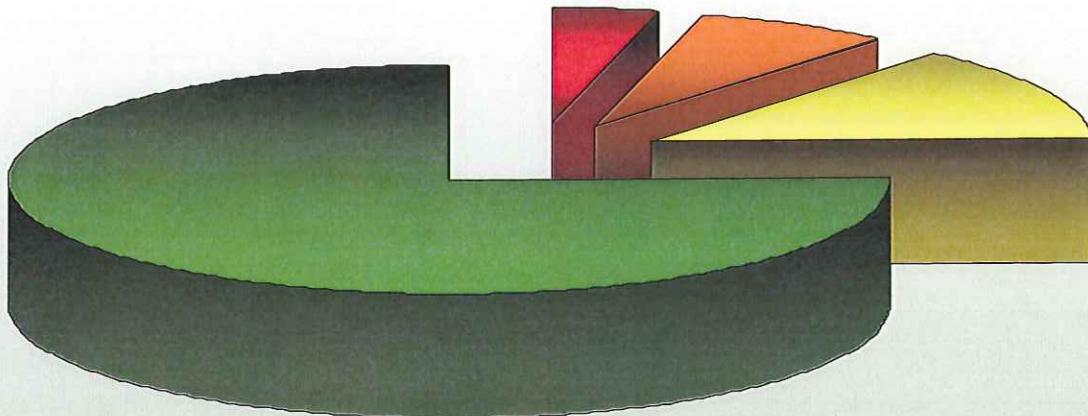

Measurements of the streets were obtained using aerials and a GIS program to get approximations of each of the streets. The following table shows the approximate total lengths and areas of the streets in feet, miles, square feet, and square miles respectively.

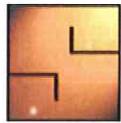

Total Length of Streets	Area of Streets
1,100,000 Feet	32,800,000 Square Feet
200 Miles	1.2 Square Mile

#### Street Lengths by Condition Rating

Total Length of Street System	= 200 Miles
"Poor" Rating Street Length	= 8 Miles
"Fair" Rating Street Length	= 14 Miles
"Good" Rating Street Length	= 27 Miles
"Excellent" Rating Street Length	= 151 Miles

- Poor
- Fair
- Good
- Excellent

### Map of City of Pharr Street System

Combining all the information gathered and analyzed, a map has been provided to illustrate and graphically represent an overall view of the city streets with color centerlines representing the condition rating of the street. This map was produced using data bases in coordination with GIS to develop the illustration shown on the following page.

## Section 4

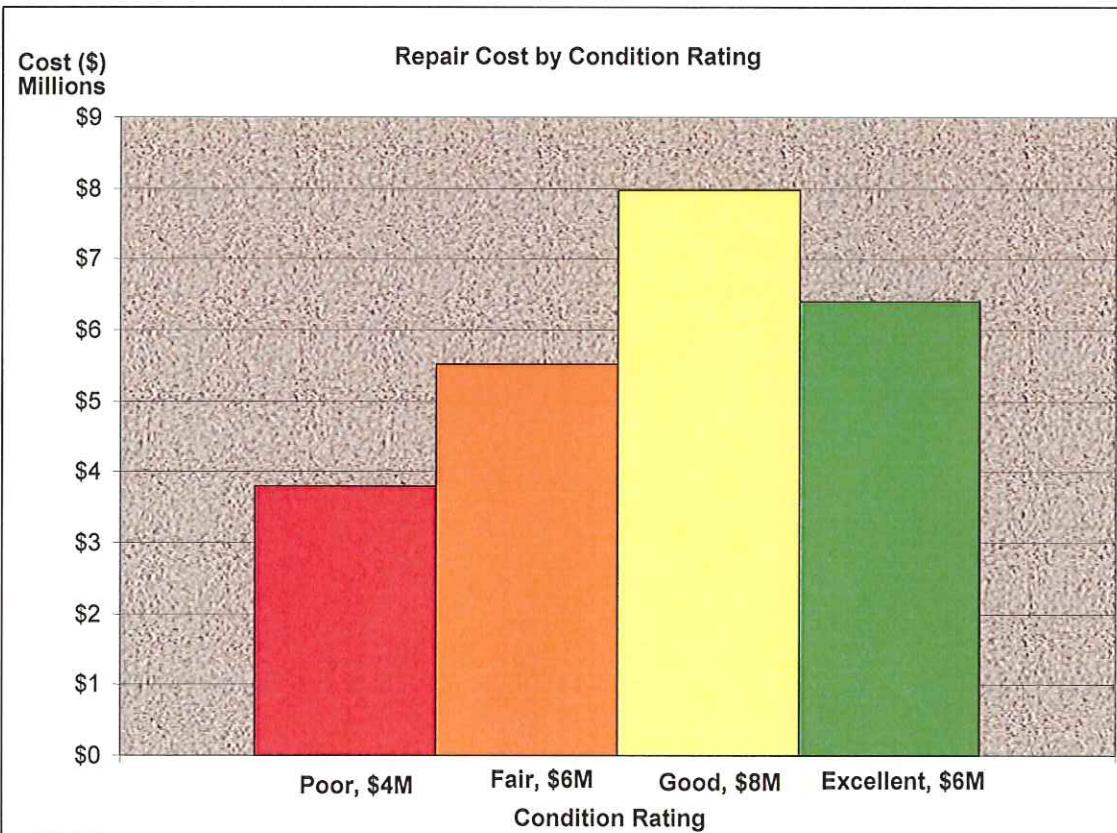

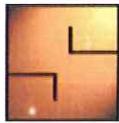

### ***Cost Estimates***

Using recent project costs and the street rating system developed, a rough cost estimate to improve a street was derived based on the severity of the deterioration to the street using the analysis of the latest construction costs. The following values have been assigned to the each of the different categories of street depending on its' rating:

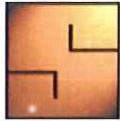

**Cost Values**

Condition	Rating	Repair	Cost / Square Foot
Excellent	100 - 90	Routine Maintenance	\$0.25
Good	89 - 80	Overlay	\$2.00
Fair	79 - 70	Patching & Overlay	\$3.00
Poor	69 - 0	Reconstruction	\$6.00
Thoroughfare	N/A	Roadway / Thoroughfare Expansion	\$7.00

These estimates assume the street will be built back to an excellent condition rating and to its current width (excluding Roadway/Thoroughfare Expansion). Streets surfaces that have been identified as concrete do are not taken into consideration and do not have a price. The costs applied to each street are located in the *Subdivision with Estimates Listing* in Section 8. The graph and table below shows the distribution of costs to each condition rating.

<b>Poor</b>	<b>\$3,793,002</b>	<b>20%</b>
<b>Fair</b>	<b>\$5,514,912</b>	<b>22%</b>
<b>Good</b>	<b>\$7,967,428</b>	<b>33%</b>
<b>Excellent</b>	<b>\$6,400,022</b>	<b>25%</b>

## Section 5

### *Alphabetical Listing*

This section provides an alphabetical list of all the streets within the City of Pharr that are responsibility of the city to maintain. This section of the report provides basic information including:

- The 2007 Street Inventory Rating for the identified section of street;
- The street name;
- The beginning and ending limits of the street the rating represents;
- The length (ft.) of the street;
- The width (ft.) of the street;
- Street surface type ( HMAC – Hot-mix overlay, CONC – Concrete)
- Whether there is curb and gutter on this portion of the street;
- Whether there are street lights on this street;
- Whether sidewalks exist on the street.

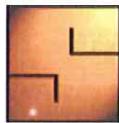

## Section 6

### *Worst to Best Listing*

This section of the report sorts the 2007 Street Inventory Rating from the street with the worst rating to the street with the best rating.

The reader can quickly find a street using Section 5 – *Alphabetical Listing* and then turn to *Section 6 – Worst to Best Listing* to see how it compares to the other street ratings in the city.

This section of the report also contains the same basic information as *Section 5 – Alphabetical Listing*.

## Section 7

### *Streets Sorted by Subdivision with Estimates*

This section of the report sorts the streets by their respective subdivision and ranks them by their rating. Using the cost estimate procedure mentioned, a price to refurbish or reconstruct the street is listed in one of the columns as well as some of the same basic information found in the other sections. This will be an effective method in determining at a glance which subdivisions would be in most need of improvements and/or maintenance and associate a cost with them.

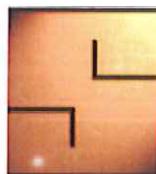

## Section 8

### *Thoroughfare with Estimates Listing*

This section of the report sorts the streets according to the thoroughfare designation of *The Hidalgo County Thoroughfare Plan* (Adopted 7/27/2000). The Collector and Secondary Arterial Streets are then sorted in alphabetical order. A cost to reconstruct each of the streets that falls within the thoroughfare designation is given in this listing. According to the thoroughfare plan outlined and adopted in 2000, streets that fall within the designated 120', 100', or 80' thoroughfare are required to maintain certain criteria. The criterion according to the thoroughfare plan is illustrated in the following table:

**Thoroughfare Table**

Thoroughfare Designation	Street Dimensions (Back to Back)	Number of Streets That are in the Thoroughfare Plan
80'	66'	12
100'	82'	5
120'	100'	0
